

### **Instructions for Shipping Samples from Abroad**

- 1) Please prepare 500 grams of a well-homogenized sample and place it in a suitable, tightly sealed plastic bag, preferably a freezer bag.
- 2) The sample label must be printed, completed in full, and securely attached to the outside of the sample bag.
- 3) If it is possible, the sample should be kept refrigerated or vacuum sealed.
- 4) Place the sample in a suitable, sturdy shipping box so that it is well protected during transport.

Please note that customs duties, import charges, or other customs-related fees may be incurred when shipping samples internationally. Any such cost charges to the recipient will be billed back to the sender.
